

rushastays.com — Production Audit Report

Pre-Admin Panel Structural, Technical SEO & Performance Review

AUDIT DATE

11 August 2026

LIVE URL

https://rushastays.com

PLATFORM

GitHub Pages (Custom CNAME)

HEALTH SCORE

62 / 100 (Action Required)

RUSHASTAYS.COM — Complete Production Website Audit Report

Audit Date: 11 August 2026

Auditor: Antigravity AI (Claude Opus 4.6)

Domain: https://rushastays.com

Hosting: GitHub Pages (NOT Netlify — see Phase 1)

Repository: https://github.com/vipulj226-design/rushastays

Total Project Size: 7.95 MB (76 images = 7.12 MB)

OVERALL WEBSITE HEALTH SCORE: 62/100

Warning

Several critical SEO and deployment issues require attention before adding an admin panel. The website functions visually but has structural problems that harm search engine indexing and long-term maintainability.

PHASE 1 — WEBSITE STRUCTURE AUDIT

Complete Page Inventory (15 HTML files)

#	FILE PATH	TITLE	PURPOSE	SIZE	INTERNALLY LINKED?	STATUS
1	index.html	Premium Living & Executive Suites in Gurugram Rusha Stays	Homepage / Landing Page	75 KB	Yes (root)	 Live
2	about.html	About Us Rusha Stays Premium Accommodation	Company, founders, vision	54 KB	Yes (navbar)	 Live
3	locations.html	Locations Managed Serviced Apartments Rusha Stays	Property browse & search	27 KB	Yes (navbar)	 Live
4	corporate.html	Corporate Stays in Gurugram Rusha Stays	Corporate housing services	61 KB	Yes (navbar)	 Live
5	faqs.html	FAQs Rusha Stays Gurugram	Frequently asked questions	90 KB	Yes (navbar)	 Live
6	blog.html	Blogs & Insights Rusha Stays	Blog listing page	28 KB	Yes (navbar)	 Live
7	404.html	Page Not Found Rusha Stays Gurgaon	Error page + JS router	8 KB	No (expected)	 Live

#	FILE PATH	TITLE	PURPOSE	SIZE	INTERNALLY LINKED?	STATUS
8	properties/sector-28-1-bhk-suite.html	1 BHK Suite in Sector 28	Property detail	18 KB	Yes (homepage)	 Live
9	properties/sector-28-executive-premium-rooms.html	Executive Premium Rooms in Sector 28	Property detail	18 KB	Yes (homepage)	 Live
10	properties/sector-28-executive-rooms.html	Executive Rooms in Sector 28	Property detail	18 KB	Yes (homepage)	 Live
11	properties/sector-28-king-room-suite.html	King Room Suite in Sector 28	Property detail	18 KB	Yes (homepage)	 Live
12	properties/sector-42-1-bhk-suite.html	1 BHK Suite in Sector 42	Property detail	18 KB	Yes (homepage)	 Live
13	properties/sushant-lok-1-bhk-studio.html	1 BHK Studio in Sushant Lok	Property detail	18 KB	Yes (homepage)	 Live
14	blog/top-10-popular-places-in-gurugram.html	Top 10 Popular Places in Gurugram	Blog post	34 KB	Yes (blog page)	 Live
15	blog/why-serviced-apartments-are-replacing-pgs-in-gurugram.html	Why Serviced Apartments Replace PGs	Blog post	37 KB	Yes (blog page)	 Live

Orphan Pages: None found. All pages are linked from at least one other page.

Broken Internal Links: None detected pointing to non-existent files.

Asset Inventory

ASSET TYPE	COUNT	TOTAL SIZE	LOCATION
CSS (unminified)	1	113 KB	styles.css
CSS (minified)	1	79 KB	styles.min.css
JS (unminified)	2	74 KB	app.js , data.js
JS (minified)	2	70 KB	app.min.js , data.min.js
JPG Images	49	5.8 MB	images/ subdirectories
WebP Images	25	1.3 MB	images/
AVIF Images	2	44 KB	images/
XML (sitemap)	1	2.8 KB	sitemap.xml
TXT (robots)	1	258 B	robots.txt
Redirects	1	672 B	_redirects
CNAME	1	14 B	CNAME

PHASE 2 — FUNCTIONALITY AUDIT

Navigation

FEATURE	STATUS	NOTES
Desktop Navbar	✅ Working	All 6 nav links resolve correctly
Mobile Hamburger	✅ Working	<code>toggleSidebar()</code> function implemented
Sidebar Menu	✅ Working	Full overlay with close button
Logo → Homepage	✅ Working	<code></code> on all pages
Footer Links	⚠️ Partial	Some footer property links use extensionless paths that depend on 404.html JS router

Interactive Elements

FEATURE	STATUS	NOTES
Hero Carousel	✅ Working	Auto-plays with dots navigation
Property Cards	✅ Working	Click navigates to detail pages
FAQ Accordion	✅ Working	Expand/collapse on click
Image Gallery (Properties)	✅ Working	Carousel with prev/next buttons
Share Button	✅ Working	Web Share API + custom fallback modal
Search/Filter	✅ Working	Locality + Room Type dropdowns
WhatsApp Float	✅ Working	<code>https://wa.me/919205859444</code>
Phone Links	✅ Working	<code>tel:+919205859444</code>
Email Links	✅ Working	<code>mailto:rushastays@gmail.com</code>
Social Media Links	✅ Working	Instagram, Facebook links verified

Forms

FORM	STATUS	NOTES
Callback Modal Form	⚠️ Issue	Form success state shown BEFORE API response completes
Web3Forms Submission	✅ Working	POST to <code>https://api.web3forms.com/submit</code>
Form Validation	⚠️ Basic	HTML5 <code>required</code> only, no phone number format validation

Issues Found

ISSUE	SEVERITY	DETAILS
Dead Code: <code>animateHeroTitle()</code>	🟡 Low	Function has <code>return;</code> as first statement — entire body is dead code
Inline <code>handleCallbackSubmit</code> overwritten	🟡 Low	Every HTML file has an inline version that gets overwritten by app.js
Duplicate element IDs in index.html	🔴 High	<code>testimonial-track</code> (x2), <code>carousel-dots</code> (x2)
<code>_redirects</code> file is Netlify-specific	🔴 Critical	This file does NOTHING on GitHub Pages — only works on Netlify

PHASE 3 — MOBILE + RESPONSIVE AUDIT

Viewport Coverage

BREAKPOINT	CSS COVERAGE	STATUS
320px Mobile	@media (max-width: 480px)	✓ Covered
375px Mobile	@media (max-width: 480px)	✓ Covered
414px Mobile	@media (max-width: 480px)	✓ Covered
768px Tablet	@media (max-width: 768px)	✓ Covered
1024px Tablet/Laptop	@media (max-width: 1024px)	✓ Covered
1366px Laptop	@media (min-width: 1025px)	✓ Covered
1920px Desktop	No max-width cap	✓ Fluid

Issues Found

ISSUE	SEVERITY	DETAILS
Global <code>overflow-x: hidden !important</code>	Medium	Applied to <code>html, body</code> — masks horizontal overflow instead of fixing root cause
Touch targets below 44px minimum	Medium	Hamburger icon (40px height), social icons (36×36px), modal close buttons
<code>!important</code> overuse in mobile media queries	Medium	Almost every property in mobile breakpoints uses <code>!important</code> , making debugging difficult
Fixed height containers	Medium	<code>.accom-card { height: 320px }</code> on mobile could clip content with large text
Duplicate media query breakpoints	Low	Both <code>@media (max-width: 991px)</code> and <code>@media (max-width: 992px)</code> exist (1px overlap)

PHASE 4 — SEO AUDIT

Meta Tags (All Pages)

PAGE	TITLE ✓	DESCRIPTION ✓	CANONICAL ✓	OG TAGS ✓	TWITTER CARDS ✓	SCHEMA ✓
index.html	✓	✓	✓	✓	✓	Organization, WebSite
about.html	✓	✓	✓	✓	✓	AboutPage
locations.html	✓	✓	✓	✓	✓	ItemList
corporate.html	✓	✓	✓	✓	✓	WebPage
faqs.html	✓	✓	✓	✓	✓	FAQPage
blog.html	✓	✓	✓	✓	✓	Blog
404.html	✓	✓	⚠	✗	✗	None
Property pages	✓	✓	WRONG	✓	✓	LocalBusiness
Blog posts	✓	✓	✓	✓	✓	BlogPosting

Critical SEO Issues

Caution

****Property Page Canonical URLs are WRONG**** All 6 property pages live at `/properties/filename.html` but their canonical tags point to `/filename.html` (missing the `/properties/` directory prefix). | Actual Live URL | Canonical URL (WRONG) |
`/rushastays.com/properties/sector-28-1-bhk-suite.html` | `/rushastays.com/sector-28-1-bhk-suite.html` |
`/rushastays.com/properties/sector-28-executive-premium-rooms.html` | `/rushastays.com/sector-28-executive-premium-rooms.html` |
`/rushastays.com/properties/sector-28-executive-rooms.html` | `/rushastays.com/sector-28-executive-rooms.html` |
`/rushastays.com/properties/sector-28-king-room-suite.html` | `/rushastays.com/sector-28-king-room-suite.html` |
`/rushastays.com/properties/sector-42-1-bhk-suite.html` | `/rushastays.com/sector-42-1-bhk-suite.html` |
`/rushastays.com/properties/sushant-lok-1-bhk-studio.html` | `/rushastays.com/sushant-lok-1-bhk-studio.html` | ****Impact****: Google may index the WRONG URL (which returns a 404), causing the property pages to be deindexed entirely.

Other SEO Issues

ISSUE	SEVERITY	DETAILS
404.html missing <code>noindex</code> meta tag	High	Search engines may index the 404 page
404.html has a canonical URL set	Medium	Should not canonicalize a 404 page
Property <code><h1></code> tags use <code>sr-only</code> class	Medium	H1 headings are visually hidden — may signal thin content to Google
Heading hierarchy skips levels	Medium	Some sections jump from h1 → h3 directly (sidebar links, <code>.serve-card h3</code>)

PHASE 5 — GOOGLE INDEXING READINESS

Indexing Status Table

PAGE	INTENDED INDEX?	IN SITEMAP?	ROBOTS ALLOWED?	NOINDEX?	CANONICAL CORRECT?	GOOGLE INDEXING VERIFIED?
<code>/</code> (Homepage)	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/about</code>	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/locations</code>	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/corporate</code>	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/faqs</code>	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/blog</code>	Yes	Yes	Yes	No	Yes	✗ Cannot verify without GSC
<code>/404.html</code>	No	No	Yes	MISSING	Should not have	✗ Cannot verify without GSC
<code>/properties/sector-28-1-bhk-suite.html</code>	Yes	Yes	Yes	No	WRONG	✗ Cannot verify without GSC
<code>/properties/sector-28-executive-premium-rooms.html</code>	Yes	Yes	Yes	No	WRONG	✗ Cannot verify without GSC

PAGE	INTENDED INDEX?	IN SITEMAP?	ROBOTS ALLOWED?	NOINDEX?	CANONICAL CORRECT?	GOOGLE INDEXING VERIFIED?
/properties/sector-28-executive-rooms.html	✔ Yes	✔ Yes	✔ Yes	No	❌ WRONG	❌ Cannot verify without GSC
/properties/sector-28-king-room-suite.html	✔ Yes	✔ Yes	✔ Yes	No	❌ WRONG	❌ Cannot verify without GSC
/properties/sector-42-1-bhk-suite.html	✔ Yes	✔ Yes	✔ Yes	No	❌ WRONG	❌ Cannot verify without GSC
/properties/sushant-lok-1-bhk-studio.html	✔ Yes	✔ Yes	✔ Yes	No	❌ WRONG	❌ Cannot verify without GSC
/blog/top-10-popular-places-in-gurugram.html	✔ Yes	✔ Yes	✔ Yes	No	✔ Yes	❌ Cannot verify without GSC
/blog/why-serviced-apartments-...html	✔ Yes	✔ Yes	✔ Yes	No	✔ Yes	❌ Cannot verify without GSC

Important

****Cannot verify Google indexing without Google Search Console access.**** All "Intended" statuses above are based on code inspection. Actual indexing status requires GSC verification.

PHASE 6 — SITEMAP AUDIT

sitemap.xml Analysis

- **Exists:** ✔ Yes
- **Live Accessible:** ✔ Verified at `https://rushastays.com/sitemap.xml`
- **Valid XML:** ✔ Well-formed
- **Total URLs:** 14
- **URL Format Consistency:** ⚠ Mixed — main pages use extensionless (`/about`), property + blog pages use `.html` extension
- **Duplicate URLs:** ❌ None
- **Lastmod dates:** `2026-07-14` (main pages), `2026-07-29` (properties + blogs) — stale, should reflect actual last modification

Issues

ISSUE	SEVERITY
URL format inconsistency (clean URLs vs <code>.html</code>)	🟡 Medium
<code>Lastmod</code> dates are outdated	🟡 Medium
<code>404.html</code> is NOT in sitemap	✔ Correct

Pages MISSING from sitemap: None — all 14 indexable pages are present.

Pages that SHOULD NOT be in sitemap: None — all entries are valid indexable pages.

PHASE 7 — ROBOTS.TXT AUDIT

robots.txt Analysis

```
User-agent: *
Allow: /

User-agent: GPTBot
Allow: /

User-agent: Google-Extended
Allow: /

User-agent: PerplexityBot
Allow: /

Sitemap: https://rushastays.com/sitemap.xml
```

- **Syntax:** Valid
- **Sitemap Declaration:** **Correct** absolute URL
- **CSS/JS/Images Blocked?:** No — all allowed (good)
- **Overly Broad Blocking?:** No — permissive configuration
- **AI Bot Rules:** Explicitly allows GPTBot, Google-Extended, PerplexityBot

Issues: None. Robots.txt is well-configured.

PHASE 8 — PERFORMANCE AUDIT

Asset Sizes

ASSET	SIZE	STATUS
<code>styles.css</code> (loaded in production)	113 KB (unminified)	Should use <code>styles.min.css</code> (79 KB)
<code>app.js</code> (loaded in production)	56 KB (unminified)	Should use <code>app.min.js</code> (54 KB)
<code>data.js</code> (loaded in production)	17 KB	Minor
Total images	7.12 MB across 76 files	Acceptable for property listings

Largest Images (Top 5)

IMAGE	SIZE
<code>image-10.jpg</code>	423 KB
<code>img-7.jpg</code>	373 KB
<code>rooftop.jpg</code>	280 KB
<code>bathroom.jpg</code>	278 KB
<code>image-9.jpg</code>	211 KB

Performance Issues

ISSUE	SEVERITY	DETAILS
Loading unminified CSS + JS in production	Critical	<code>styles.css?v=3.0</code> (113 KB) instead of <code>styles.min.css</code> (79 KB). Wastes ~34 KB per page load

ISSUE	SEVERITY	DETAILS
@import in CSS for Google Fonts	High	Render-blocking chain: Browser downloads CSS → finds @import → starts ANOTHER request for Google Fonts. Should use <link> in HTML <head> instead
Zero loading="lazy" on images	High	0 images across ALL HTML files use lazy loading. Every image loads immediately
No preconnect for Google Fonts	Medium	Missing <link rel="preconnect" href="https://fonts.googleapis.com">
Inconsistent defer on app.js	Medium	Only 2 pages use defer (404.html, corporate.html). Other 13 pages load JS synchronously
Property pages preload ALL gallery images	Medium	e.g., sector-28-1-bhk-suite.html preloads 6 images at once — defeats the purpose of lazy loading
Inline scripts before <head> meta tags	Medium	3 inline <script> blocks run before any CSS/meta is parsed

Core Web Vitals (Code-Based Estimates)

Note

These are estimates based on code inspection, NOT actual Lighthouse measurements.

METRIC	ESTIMATE	CONFIDENCE
LCP	⚠️ Likely Poor (>2.5s)	Medium — unminified CSS + render-blocking Google Fonts @import + no lazy loading
INP	✅ Likely Good (<200ms)	Medium — minimal JS interaction handlers
CLS	✅ Good (<0.1)	High — pre-rendered static HTML in index.html

PHASE 9 — ACCESSIBILITY AUDIT

ISSUE	SEVERITY	DETAILS
Missing skip-to-content link	High	Only faqs.html has a skip link. 14 other pages have none
Missing focus styles	High	No :focus or :focus-visible CSS rules for interactive elements
Missing modal focus trap	Medium	Modals don't trap keyboard focus — Tab key escapes the modal
Modal close button missing aria-label	Medium	<button class="modal-close">×</button> — screen readers read "times"
Touch targets < 44px	Medium	Hamburger (40px), social icons (36×36px)
Heading hierarchy skips	Medium	Some pages jump h1 → h3
Color contrast on image overlays	Medium	Red text .hero-v2__sub-red over background images may fail contrast checks depending on image content
Alt text on dynamic JS images	Low	Property gallery images include alt text in JS but not in static HTML
ARIA attributes	Good	aria-label on carousel buttons, logo link, and social links
Form labels	Good	<label for=""> correctly paired with inputs

PHASE 10 — SECURITY AUDIT

ISSUE	SEVERITY	DETAILS
Web3Forms API Key exposed in JS	Low	<code>e5c58afb-dab6-4b34-9021-b74503947cb1</code> in <code>app.js</code> line 5. Web3Forms keys are designed to be public/frontend-safe, but it's still visible
Email exposed in JS	Low	<code>rushastays@gmail.com</code> — expected for a business site
WhatsApp number in source	OK	<code>919205859444</code> — intentionally public
22 instances of <code>innerHTML</code>	Medium	All data is currently from static <code>data.js</code> , but if dynamic user data is ever added, this becomes an XSS risk
No CSP (Content Security Policy) headers	Medium	No <code>Content-Security-Policy</code> meta tag or header
Mixed content	None	All resources load over HTTPS
Exposed credentials/passwords	None	No private keys, passwords, or database credentials found

PHASE 11 — DEPLOYMENT AUDIT

Caution

****The website is hosted on GitHub Pages, NOT Netlify.**** Evidence: - `CNAME` file contains `rushastays.com` (GitHub Pages custom domain mechanism) - Git remote is `https://github.com/vipulj226-design/rushastays.git` - Clean URL routing works via GitHub Pages' built-in behavior (serving `about.html` for `/about`) - No `netlify.toml` configuration file exists ****The `_redirects` file in the project is a Netlify-specific feature and does NOTHING on GitHub Pages.** The blog post redirects it defines are instead handled by JavaScript in `404.html`.

Deployment Issues

ISSUE	SEVERITY	DETAILS
<code>_redirects</code> file is useless	Medium	Netlify-only file — does nothing on GitHub Pages
No <code>_headers</code> file or equivalent	Medium	No custom cache headers configured
No <code>.nojekyll</code> file	Low	GitHub Pages may process files through Jekyll unnecessarily (though no underscore-prefixed directories exist besides <code>_redirects</code>)
<code>404.html</code> acts as JavaScript router	Note	Clean URLs for blog posts work via <code>404.html</code> JS redirect — functional but not SEO-friendly (returns 404 status to crawlers)

PHASE 12 — CODE QUALITY AUDIT

ISSUE	SEVERITY	DETAILS
Massive code duplication across HTML files	High	Callback modal HTML + inline <code>handleCallbackSubmit</code> JS is copy-pasted across all 15 HTML files (~30 lines each)
<code>animateHeroTitle()</code> is dead code	Low	Has <code>return;</code> as first line — entire function body never executes
Inline JS <code>handleCallbackSubmit</code> gets overwritten	Low	Every HTML defines this function inline, but <code>app.js</code> overwrites it with the real Web3Forms version
56 inline <code><script></code> tags across 15 files	Medium	Service Worker unregister, URL cleanup, modal handlers duplicated everywhere

ISSUE	SEVERITY	DETAILS
Unminified assets loaded in production	🔴 Critical	<code>styles.css</code> + <code>app.js</code> instead of <code>.min.css</code> + <code>.min.js</code>
Duplicate CSS rules	🟡 Medium	<code>.hero-feature-card</code> , <code>.modal-overlay</code> , <code>.modal-container</code> defined multiple times in <code>styles.css</code>
Property pages have near-empty <code><main></code>	🟡 Medium	<code><main id="app-content"></code> contains only <code>sr-only</code> heading — all content is JS-injected
Duplicate element IDs in <code>index.html</code>	🔴 High	<code>testimonial-track</code> (x2), <code>carousel-dots</code> (x2) — violates HTML spec
<code>!important</code> overuse	🟡 Medium	Heavily used in mobile media queries, making CSS difficult to maintain
z-index escalation	🟡 Low	Values range from 1 to 9999 — could cause layering conflicts

CONSOLIDATED ISSUE SUMMARY

1. 🔴 CRITICAL ISSUES (Must Fix)

1. **Property page canonical URLs are WRONG** — point to `/filename.html` instead of `/properties/filename.html`. This can cause Google to deindex all property pages.
2. **Loading unminified CSS + JS in production** — `styles.css` (113 KB) and `app.js` (56 KB) instead of minified versions. ~38 KB wasted per pageview.
3. **@import Google Fonts in CSS** — creates a render-blocking waterfall chain.

2. 🟡 HIGH PRIORITY ISSUES

4. **404.html missing `<meta name="robots" content="noindex">`** — search engines may index the 404 page.
5. **Zero `loading="lazy"` on images** — all images load immediately on every page.
6. **Duplicate element IDs in `index.html`** — `testimonial-track` and `carousel-dots` appear twice.
7. **Missing skip-to-content link** on 14 of 15 pages.
8. **Missing CSS `:focus` styles** — keyboard users cannot see focus indicators.
9. **`_redirects` file does nothing** — Netlify-only feature on a GitHub Pages site.

3. 🟡 MEDIUM PRIORITY ISSUES

10. **Callback modal HTML duplicated across 15 files** — maintainability nightmare.
11. **56 inline `<script>` blocks** duplicated across HTML files.
12. **Touch targets below 44px** — hamburger (40px), social icons (36×36px).
13. **No Content Security Policy meta tag.**
14. **Inconsistent `defer` on `app.js`** — only 2 of 15 pages use it.
15. **Sitemap `lastmod` dates are stale** (July 2026).
16. **Modal close buttons missing `aria-label`**.
17. **Global `overflow-x: hidden !important`** masks layout problems.
18. **Property pages have near-empty static HTML** — all content JS-rendered.
19. **innerHTML usage** (22 instances) — potential XSS vector if user data is ever added.
20. **Duplicate CSS rules** in `styles.css`.
21. **Form success state shown before API response.**

4. 🟢 LOW PRIORITY ISSUES

22. **Dead function `animateHeroTitle()`** — `return;` as first line.
23. **Inline `handleCallbackSubmit` overwritten by `app.js`.**
24. **Duplicate media query breakpoints** (991px and 992px overlap).

25. No `.nojekyll` file.

26. **z-index escalation** (1 to 9999).

27. **Alt text on JS-rendered images** only available after JS execution.

PAGE-BY-PAGE TABLE

PAGE	STATUS	SEO	INDEXABILITY	SITEMAP	CANONICAL	MOBILE	FUNCTIONALITY	ISSUES
<code>index.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	Duplicate IDs (x2)
<code>about.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	No defer on JS
<code>locations.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	No defer on JS
<code>corporate.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	—
<code>faqs.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	Only page with skip link
<code>blog.html</code>	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	No defer on JS
<code>404.html</code>	✔ Live	⚠ Missing noindex	✗ Should Not	✗ No	⚠ Should not have	✔ Good	✔ Working	Missing noindex
<code>properties/*.html</code> (x6)	✔ Live	❌ Wrong canonical	✔ Yes	✔ Yes	❌ WRONG	✔ Good	✔ Working	Canonical URL mismatch
<code>blog/*.html</code> (x2)	✔ Live	✔ Good	✔ Yes	✔ Yes	✔ Correct	✔ Good	✔ Working	—

✔ MUST FIX BEFORE ADDING ADMIN PANEL

1. Fix property page canonical URLs — Change from `/filename.html` to `/properties/filename.html`
2. Add `<meta name="robots" content="noindex">` to `404.html`
3. Switch production HTML to load minified assets (`styles.min.css` + `app.min.js`)
4. Fix duplicate element IDs in `index.html`
5. Move Google Fonts `@import` from CSS to `<Link>` tags in HTML `<head>`

🟡 OPTIONAL IMPROVEMENTS (Recommended)

1. Add `loading="lazy"` to below-fold images
2. Add `<link rel="preconnect">` for Google Fonts and CDN domains
3. Add `defer` attribute to `app.js` on all pages
4. Add skip-to-content link to all pages
5. Add CSS `:focus-visible` styles
6. Add `aria-label` to modal close buttons
7. Consolidate inline scripts and callback modal HTML into a shared include
8. Increase touch target sizes to 44px minimum

9. Update sitemap `lastmod` dates
 10. Remove `_redirects` file (dead on GitHub Pages)
 11. Add `.nojekyll` file
 12. Add Content Security Policy meta tag
 13. Remove dead `animateHeroTitle()` function
-

SAFE TO ADD ADMIN PANEL: NO ❌

Caution

****Fix the 5 "Must Fix" items above before adding an admin panel.**** The canonical URL mismatch on property pages is actively harmful to SEO and should be the top priority. Loading unminified assets in production is a performance issue that compounds as you add more pages via an admin panel. Once those 5 items are fixed, the website is structurally sound enough to safely integrate an admin panel.

Report generated by Antigravity AI — 11 August 2026, 09:36 IST

Based on: Local code inspection + Live website verification at <https://rushastays.com>

Limitations: Google Search Console access required to verify actual indexing status
